

AHEAD International Research (Ageing, Health Status and Determinants of Health Expenditure). The AHEAD project, prepared by ENEPRI, was accepted for financing in the framework of the VI European programme. The project is a study on long-term health expenditure, with particular reference to the effects of ageing. ISAE has gone into the matter of health expenditure in the last months of life, both through an empirical analysis of the Italian situation and preparing a survey on the international literature on the subject.

Link: <http://www.enepri.org/Ahead>

Two Reports, issued on the ENEPRI and CEPS websites, have been drawn up by ISAE in the framework of the AHEAD project:

- 1) M. Raitano, **The impact of death-related costs on health-care expenditure: a survey**, ENEPRI Research Report no 17, (<http://www.enepri.org/files/Publications/RR17.pdf>)
- 2) S. Gabriele and C. Cislighi and F. Costantini and F. Innocenti and V. Lepore and F. Tediosi and M. Valerio and C. Zocchetti, **Demographic Factors and Health Expenditure Profiles by Age: The Case of Italy**, Enepri Research report no 18 (<http://www.ceps.be/book/demographic-factors-and-health-expenditure-profiles-age-case-italy>)
